

Job Title: Oracle PL/SQL Developer

Job Responsibilities:

- Propose system solutions based on user requirements.
- Design system solutions with user requirements in mind.
- Prepare technical design documents based on functional specifications.
- Write code to implement the proposed design.
- Perform system integration testing and document test results with test cases and evidence.
- Ensure systems are fully tested to eliminate rework and meet agreed functional and design specifications.
- Prepare UAT environment deployment request documents.
- Conduct post-UAT deployment verification.
- Support users during user acceptance testing and provide briefings for complex test scenarios.
- Follow up with users to ensure proper request closure.
- Perform post-production deployment verification.
- Provide first-level support for production system users.
- Escalate production issues to relevant parties, including vendors and internal departments.
- Maintain high work standards, productivity, and quality compliance.
- Ensure conformance to guidelines and company IT policies.
- Gather, determine, and understand user requirements.
- Conduct system studies to identify root causes of reported issues.
- Highlight system impacts for proposed changes.
- Interact with users to extract and document requirements.

- Prepare functional specifications based on user requirements.
- Ensure projects are delivered within budget and timeline.

Job Requirements:

- **Experience:** 0-5 years in a relevant field.
- **Education:** Bachelor's Degree in IT or Computer Science.
- **Core Competency:** Oracle PL/SQL.
- **Additional Skills (Nice to Have):** Oracle Forms and Reports (D2K).
- **Other Requirements:**
 - Ability to work independently.
 - Self-motivated with good interpersonal skills.
